

Patient-Centered Care: Home Infusion Therapy

Southeastern Home Health Services' Home Infusion Therapy program is a specialty clinical program that provides full-service infusion therapy services to patients in the comfort of their own home.

Our Registered Nurses and skilled interdisciplinary team provide exceptional clinical care based on standards of practice developed by the Infusion Nurses Society (INS). These standards adhere to scientific-based research, which results in positive outcomes that are both clinically effective and cost effective, helping patients get the care they need in the comfort of their home.

Our specially trained infusion RN team provides infusion therapy in the home with compassion and expertise to ensure our patients return to well being. The clinical team works directly with your physician and infusion pharmacists to administer prescribed therapy while monitoring the effectiveness of treatment.

Care is individualized for each patient and involves initial and ongoing education, close monitoring of the patient's response to treatment, and management of prescribed therapy and infusion device.

Southeastern Home Health Services' Infusion Therapy program focuses on:

- Collaboration with the physician and infusion pharmacy team
- Coordination of the delivery of medication, supplies, and equipment
- Education and support from our infusion team, to assist you and your caregiver to appropriately and safely manage your medication, supplies, and equipment
- Educational materials specific to your condition and medications
- Quality, satisfaction and other outcomes measurement

Southeastern Home Health Services' Home Infusion Therapy program is committed to improving quality of life for patients and caregivers. We achieve this by providing care that is more personalized, individualized, and cost-effective than an in-patient hospital stay.

Home infusion therapy also reduces the risk for acquiring an opportunistic infection. Home infusion therapy allows patients to return to their regular schedule and promotes faster healing and recovery time.

Infusions in the home: TPN, Hydration, IVIG, Inotropes, Diuretics, Antibiotics, 5FU, Solumedrol, various RA medications

Access lines: Peripheral, PICC, Midline, Port, Hickman Catheters
